Projects

Project A: Hospital Vendor App (4 Months)

- **Details:** Book a package, test to vendor with payment online and offline and vendor contact to user.
- **Work Role:** Admin Panel Development, Rest Api's.
- **Technology:** PHP (Laravel), MySQL, HTML, CSS, jQuery.

Project B: SiteApprove (Product Base) <https://www.siteapprove.com.au/> (1 years and 8 months)

- **Details:** It is a comprehensive platform facilitating the upload and management of user certifications, which can be approved or rejected by Site Safety Engineers (SSE). Companies have the capability to upload and share their own documents with other contractor companies. The website encompasses multiple user roles, including System Admin, Super Admin, Account Holder, SSE, Site Worker, and Supervisor. The System Admin and Super Admin oversee all aspects of the application, including user creation and management, as well as monthly subscription handling. Account Holders, representing company owners, can create and manage their company profiles within the portal. SSEs, site workers, and supervisors are assigned projects by Account Holders, with the flexibility to invite other contractors to join their company and participate in projects. Contractors can accept company invitations and add their own employees to contractor projects.
- **Work Role:** Admin Panel Development, Rest API's, Google API Integration, Firebase Integration.
- **Technology:** PHP (Laravel), MySQL, HTML, CSS, jQuery.

Project C: DraftDays (4 Months)

- **Details:** It is a sports application designed for creating teams within a league context. Once the league begins, a live scoreboard displays team standings throughout each round, allowing teams to make player selections within a set timer. League administrators have the ability to pause the timer as needed. Additionally, the application features an integrated chat system for seamless communication among participants.
- **Work Role:** Web development, Admin Panel Development, Rest API's, Payment Gateway Integration (Stripe), Realtime database with Authentication.
- **Technology:** PHP (Laravel), MySQL, HTML, CSS, jQuery.

Project D: Travelling (2 Months)

- **Details:** Plan your trips effortlessly with ChatGPT. Simply provide details such as trip duration, number of travelers (including pets), and budget. After submission, ChatGPT will generate a tailored trip itinerary, complete with location names, photos, and day-wise listings, ensuring a seamless travel experience
- **Work Role:** Web development, Rest API's
- **Technology:** API (Lumen), MySQL, Web(Vue JS), Mobile (React Native)

Project E: Stock Market Advice Making System

- **Details:** It's App is SEBI Registered. The Stock Market Advice Making System facilitates three distinct roles: Admin, User, and Subscriber. Users have the option to subscribe to various products. Admin provides stock market advice to users Weekly, Monthly. In the Smart Manager project, Admin manages user portfolios and provides stock market insights. And the project I have working as version upgrade with new Technology (Codeigniter to Laravel) and I have make many pages.
- **Work Role:** Web development, Rest API's
- **Technology:** Laravel, MySQL, Mobile (React Native)

Project F: Ride-hailing Application

- **Details:** In my role at Application, I am responsible for API development, collaborating closely with a team. The app caters to two primary roles: drivers and passengers. Passengers can subscribe with their preferred routes, enabling multiple trips and generating subscription amounts. On the other hand, drivers can subscribe to monthly plans, accept ride requests, and complete trips for passengers.
- **Technology:** API (Laravel), MySQL, Mobile (React Native)

Project G: Job Portal System

- **Details:** Developed job portal application that streamlines job searching, application, and professional branding. Key features include an AI-driven cover letter generator that creates personalized, industry-standard letters using user details like name, resume, and job descriptions; a seamless job application system with real-time status tracking; and a dynamic portfolio builder allowing users to showcase their experience, skills, and projects with customizable templates. Leveraging technologies like **Laravel, Vue JS, and OpenAI's GPT API**, the platform enhances the user experience by automating tedious processes and empowering users with professional tools for career growth.
